

SPF SIG PNMM Causal Factor Tool #3 Provider Knowledge Summary

This form will allow you to summarize the general levels of knowledge of providers in your community regarding recognizing prescription drug misuse and abuse. It is for your use (it does not have to be submitted to the state as part of your plan) and so may be altered to fit your needs. Be sure to solicit information from a wide variety of professionals with narcotic prescription privileges. Create additional rows by pressing TAB from the bottom right cell in a table. To delete a row, click a cell in the row(s) you want to get rid of, right click, select "delete cells" and then "delete entire row." This Tool is for your own use and does not have to be submitted to the state as part of your plan. It is being provided as a way to organize your data; alter it to fit your needs. Although this Tool is not required, it may be submitted as supporting documentation along with your answers to the PNMM Causal Factor Focus Tools. If you do not use this tool, you will still need to be able to provide documentation of the data you collected.

The tables below provide a place for you to summarize various types of trainings providers may have received. For each type of training, providers may have attended more than one training. In this case, use the information from the most recent training attended when completing the table. For columns that ask for percentages, the formula is provided in the column heading. Don't forget to multiply by 100.

Training for Recognizing Prescription Drug Abuse					
<i>Provider</i>	<i>Total # providers contacted</i>	<i>% of providers trained (#trained/#contacted)</i>	<i>% trained specific to narcotics (#trained/#contacted)</i>	<i>Average# of trainings received</i>	<i>Average # months since most recent training</i>
Physicians					
Dentists					
Pharmacists					

For the providers who received training, what percentage attended voluntarily or were required to attend?			
<i>Provider</i>	<i>% of trainings attended that were required (#required/#trained)</i>	<i>% of trainings attended as an option for fulfilling a requirement (#requirement option/#trained)</i>	<i>% of trainings attended that were voluntary (#voluntary/#trained)</i>
Physicians			
Dentists			
Pharmacists			

Who provided the trainings?

Agency/Organization

% of Trainings

For those for whom it was required, who required the training?

Agency/Organization

% of Trainings

For those who chose the training from a number of options to fulfill a requirement or for whom it was entirely voluntary, why did they decide to attend the training?

Reason

% who gave this reason

For those who have not been trained in recognizing prescription drug abuse, why not?

Reason

% who gave this reason

Trainings are not available

For those who have not been trained because trainings were not available, would they attend a training if it were offered at a time they could attend?

Response

% who gave this reason

Yes

No

Not sure

Comments on Drug Abuse Training (including what topics were covered during the trainings):
